1. Digging Radius is measured from the central pivot point of the machine. 2. Dump Height is measured at the lowest point of the bucket with the bucket fully curled and the boom fully raised. 3. Width on the U17 is measured at the outside of the tracks when retracted and extended. 4. Lift Capacity is measured from the bucket hinge pin over the front of the machine with the blade on the ground. 5. Lift Capacity is measured in pounds at the height above ground and distance from central pivot point of the machine as listed below and does not include the weight of the bucket. a. U17 = 4' Height/ 6' Distance b. U27, KX040 = 4' Height / 8' Distance c. U55, KX080 = 4' Height/ 12' Distance 6. All machines have rubber tracks, and specifications are for machines with rubber tracks .
